Assistive/Computer Techniques
and Technology Services

*Making the Best
of Your Abilities*

What do ***you*** want or need to
do?

do better?

do faster?

do more often?

do more easily?

do more accurately?

What do ***you do*** well?

What can ***we do*** now?

We can work together to identify your
needs and abilities, set high-level
goals and enable you to achieve them.

What we *do*

We accelerate assistive access, *making the best of people's abilities*. We work *hands-on, one-on-one*, to augment and leverage abilities, so as to compensate for disabilities. Our *personal touch* will *identify and reduce barriers*, using adaptive aids, techniques and ideas to *enhance* quality of and independence in daily life -- in home, school, community and vocation. We determine *high-level goals* and steps to achieve them, then implement those steps.

Our full spectrum of services includes

- evaluation
- selection
- acquisition
- coordination
- set-up and training
- review and iteration

We emphasize technology solutions, with custom cognitive and mechanical adaptations. We seek the most appropriate and least restrictive solutions, whether they are high tech, low tech, or even no tech.

Our broad experience, with a wide range of circumstances and technology, enables innovative, synergistic application of standard, off-the-shelf artifacts, hardware and software where feasible, and specialized tools where necessary.

We provide services directly, or via our relationships with schools, organizations such as THHS and TWC, and programs such as CLASS and HCS. For expediency and continuity, i.e., to provide services when and where they are most beneficial, we can offer a sliding fee scale as a bridge, while awaiting indirect funds.
